

CLEAN RAIN ADVANCED/ULTRA

Washer Replacement

FIRST FLUSH CLEAN RAIN ADVANCED AND ULTRA

To maintain optimum performance, the washers located at the bottom of the Clean Rain Advanced or Clean Rain Ultra down-spout filter and diverter should be replaced if there are decreased amounts of first flush or increasingly longer reset periods.

Replacing the Washers

1. Remove the bottom adaptor portion of the Clean Rain diverter and remove the small nut holding the washer assembly together.

2. Remove the small black housing and washers from the metal rod and replace all 46 washers.

3. Reassemble the housing and sleeve retainer. Retighten the nut and reattach the bottom adaptor section.
